

Feedback on my seminar "Bayesian Risk Modelling in Health Research", at the Multivariate training event, Wolfson Institute, London 17 Jan 2020

As promised here is a summary of the feedback we received from attendees of our event, I hope you find it useful:

- A very engaging talk, excellent delivery and lots of interesting information.
- Very clearly explained and demonstrated Bayes' Theorem which I appreciated. I liked the interactiveness of the talk.
- I liked the emphasis on understanding the problem by building directed acyclic graphs before building the models.
- Visually-orientated so it helped us understand everything. Very interactive in a way it sparked curiosity.
- I would have liked more details on the maths behind the causal models.
- I especially liked the way the delivery of the presentation was made interactive and the salient points of Bayesian analysis compared to non-Bayesian approaches.

Generally there was a lot of comments saying they liked the interactive aspect of the lecture and that it was easy to follow.
